Neural Style Transfer

Problem: Style transfer requires many forward / backward passes through VGG; very slow!

Solution: Train another neural network to perform style transfer for us!

Fast Style Transfer

(1) Train a feedforward network for each style
(2) Use pretrained CNN to compute same losses as before
(3) After training, stylize images using a single forward pass

One Network, Many Styles

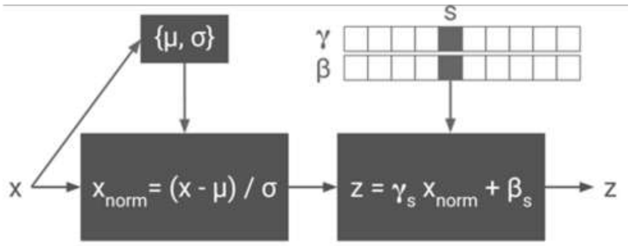
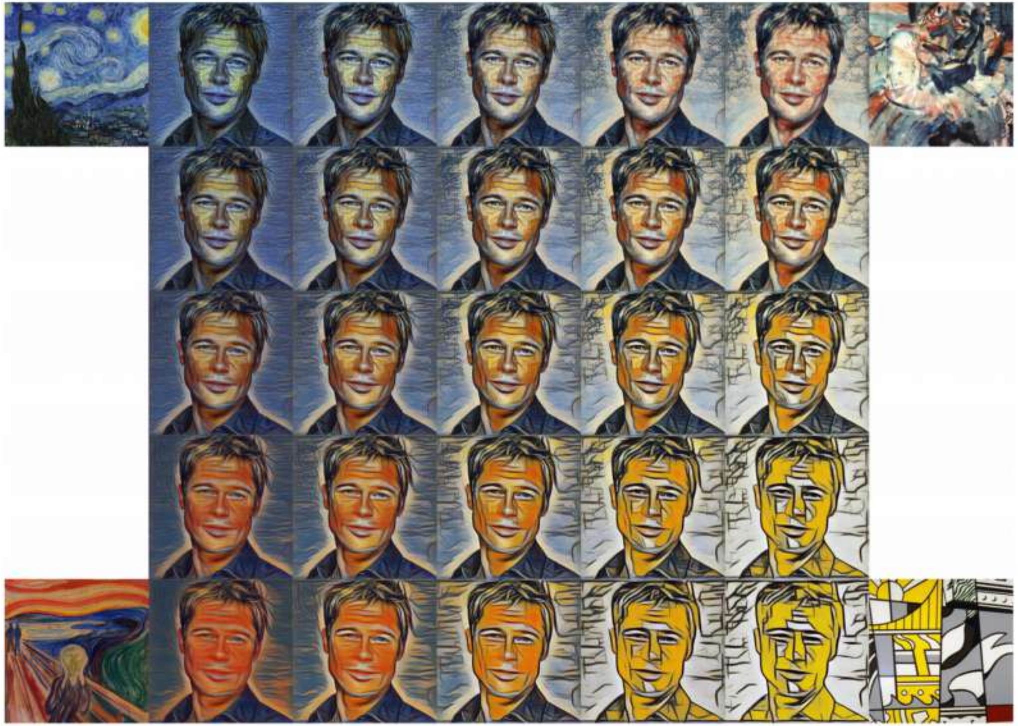
Use the same network for multiple styles using *conditional instance normalization*: learn separate scale and shift parameters per style





Single network can blend styles after training
